Prueba de invarianza temporal y linealidad

• Linealidad:

$$\ddot{y}(t) + 4\dot{y}(t) + 8y(t) = 2x(t), CI = 0$$
$$\ddot{y}(t) = 2x(t) - 4\dot{y}(t) - 8y(t)$$

• No lineal

$$\ddot{y}(t) + 4\dot{y}(t) + 8y(t) = 2x(t) + 1, CI = 0$$
$$\ddot{y}(t) = 2x(t) - 4\dot{y}(t) - 8y(t) + 1$$

Invarianza temporal:

• Invariante en el tiempo

$$\ddot{y}(t) + 4\dot{y}(t) + 8y(t) = 2x(t)$$

• Variante en el tiempo

$$\ddot{y}(t) + 4t\dot{y}(t) + 8y(t) = 2x(t)$$
